THE SEX SOLUTION

Sexual issues: The testicular artery is the smallest artery in a man's body, therefore it the body's natural detection mechanism as the earliest sign of heart disease. A lack of a morning erection is the body's precursor signal denoting that other issues are on the horizon. A morning erection is the body's indication that it is properly oxygenated and operating at optimal circulation performance. On the other hand, women have an early morning "orgasm" but they are not aware of it. Self-calibration occurs by becoming aware of your brain and body's interconnectivity within your waking moments. Drugs and alcohol compromise

and dull sexual awareness, therefore sex becomes physical consequently disconnecting from the emotional. This emotional disconnect is damaging to spirituality and inner peace. It is important to understand the REAL power of sex and its role on the impact of your health.

Protocols for:

- Hormone Balancing
- E.D. treatments with Gainswave technology
- Menopause (dopamine)
- O-Shot for women
- P-Shot and erectus shot for men
